

The Dutch approach to micro-credentials

Paul den Hertog
18-04-2023

Introduction

Paul den Hertog

Senior advisor Flexible education and Lifelong learning.

SURF

National Research and Education Network in The Netherlands, with over one hundred active members.

A European approach to Micro-credentials

What is a micro-credential?

The European approach to micro-credentials offers a common definition that is valid across sectors of education and the world of work and mirrors the societal mission of education and training institutions, including higher and vocational education and training (VET) institutions, and nonformal providers as well as employers and labour market actors.

A micro-credential is the record of the learning outcomes that a learner has acquired following a small volume of learning. These learning outcomes have been assessed against transparent and clearly defined standards.

Courses leading to micro-credentials are designed to provide the learner with specific knowledge, skills and competences that respond to societal, personal, cultural or labour market needs.

Micro-credentials are owned by the learner, can be shared and are portable. They may be standalone or combined into larger credentials. They are underpinned by quality assurance following agreed standards in the relevant sector or area of activity.

Mandatory and optional meta-data

What EU standard elements should it include?

The basis for trust in micro-credentials is transparency. Micro-credentials should be clearly identified as such with elements that make it possible for learners, education and training institutions, quality assurance agencies, and

Mandatory elements

- · Identification of the learner
- · Title of the micro-credential
- · Country/Region of the issuer
- Awarding body
- Date of issuing
- · Learning outcomes
- Notional workload needed to achieve the learning outcomes (in ECTS credits, wherever possible)
- Level (and cycle, if applicable) of the learning experience leading to the micro-credential (EQF, QF-EHEA), if applicable
- Type of assessment
- · Form of participation in the learning activity
- Type of quality assurance used to underpin the micro-credential

employers to understand the value and content of micro-credentials and to compare them.

The European approach to micro-credentials suggests a list of critical information elements that any micro-credential should provide:

Optional elements, where relevant -(non-exhaustive list)

- Prerequisites needed to enrol in the learning activity
- Supervision and identity verification during assessment (unsupervised with no identity verification, supervised with no identity verification, supervised online or onsite with identity verification)
- · Grade achieved
- Integration/stackability options (standalone, independent micro-credential / integrated, stackable towards another credential)
- Further information

Quality Assurance

Quality

Micro-credentials are subject to **internal and external quality assurance** by the system producing them (e.g. the education, training or labour market context in which the micro-credential is developed and delivered). Quality assurance processes must be **fit-for-purpose**, **be clearly documented**, **accessible**, **and meet the needs** of learners and stakeholders.

External quality assurance is based primarily on the **assessment of providers** (rather than individual courses) and the effectiveness of their internal quality assurance procedures.

External quality assurance is conducted in line with:

- Annex IV of the European qualifications framework Recommendation, where applicable;
- the Standards and Guidelines for Quality
 Assurance in the European Higher Education
 Area, where applicable;
- the European quality assurance reference framework (the EQAVET Framework) in the field of vocational education and training, where applicable;
- other quality assurance instruments, including registries and labels, to build public trust in micro-credentials, where applicable.

Providers should make sure that **internal quality assurance** covers all the following elements:

- the overall quality of the micro-credential itself, based on the standards referred to below
- the quality of the course, where applicable, leading to the micro-credential
- learners' feedback on the learning experience leading to the micro-credential; and
- peers feedback, including other providers and stakeholders, on the learning experience leading to the micro-credential

Transparency

Transparency

Micro-credentials are measurable, comparable and understandable with **clear information on learning outcomes**, **workload**, **content**, **level**, and the **learning offer**, as relevant.

Workload

- Higher education institutions should use the European Credit Transfer and Accumulation System (ECTS) and comply with the principles in Annex V to the EQF Recommendation, wherever possible, to demonstrate the notional workload needed to achieve the learning outcomes of the micro-credential.
- Providers that do not use the ECTS may use other systems or types of information that can effectively describe learning outcomes and workload, in compliance with the principles in Annex V to the EQF Recommendation.

Qualifications framework/ systems

 Micro-credentials may be included in national qualifications frameworks/ systems, where relevant and in line with national priorities and decisions. National qualifications frameworks/ systems are referenced to the European qualifications framework and, for higher education qualifications, selfcertified to the qualifications framework of the European Higher Education Area, which can further support the transparency, and trust in, micro-credentials

Information on the offer of micro-credentials

- Systems for micro-credentials should provide transparent and clear information, to underpin guidance systems for learners, in line with national practices and stakeholders needs:
- Information on providers
 of micro-credentials should
 be published in registers,
 or incorporated into existing
 registers. Higher-education
 providers (and other relevant
 providers) should be included,
 where possible, in the
 Database of External Quality
 Assurance Results (DEQAR),
 based on quality assurance in
 line with the Standards and
 Guidelines for Quality Assurance
 in the European Higher Education
 Area (ESG);

Relevance, assessment and Learning Pathways

Relevance

Micro-credentials should be designed as **distinct**, **targeted learning achievements**, and learning opportunities leading to them are **updated** as necessary, to meet identified learning needs.

Cooperation between education and training organisations, employers, social partners, other providers, and users of micro-credentials is encouraged to **increase the relevance** of the micro-credentials for the labour market.

Valid assessment

Micro-credential learning outcomes are assessed against transparent standards.

Learning Pathways

Micro-credentials are designed to support **flexible learning pathways**, including the possibility to **stack, validate**, and **recognise** micro-credentials from across different systems.

Stackability

Micro-credentials are designed to be **modular** so that other micro-credentials may be added to create larger credentials. Decisions to stack or combine credentials **lie with the receiving organisation** (e.g. education and training institutions, employers, etc.) in line with their practices and should support the **goals and needs of the learner.**

Validation of non-formal and informal learning

Obtaining micro-credentials is possible following assessment of learning outcomes, obtained either through a specific course leading to a micro-credential, or on the basis of assessment of learning outcomes resulting from **non-formal and informal learning.**

Recognition and portability

Recognition

Recognition has a clear **signalling value** of learning outcomes and paves the way for a wider offer of such small learning experiences in a **comparable way across the EU**.

Micro-credentials are recognised for academic or employment purposes based on standard recognition procedures used in recognising foreign qualifications and learning periods abroad, when dealing with micro-credentials issued by formal education providers.

Portability

Micro-credentials are **owned** by the credential-holder (the learner) and may be **stored** and **shared** easily by the credential-holder, including through secure **digital wallets** (e.g Europass), in line with the General Data Protection Regulation. The infrastructure for storing data is based on **open standards** and **data models**, This ensures interoperability and seamless exchange of data, and allows for smooth checks of data authenticity.

Learner centered, authentic, for everyone!

Learner-centred

Micro-credentials are designed to **meet the needs of the target group of learners**. Learners are involved in the internal and external quality assurance processes and their feedback is taken into account as part of the continuous improvement of the micro-credential.

Authentic

Micro-credentials contain sufficient information to **check the identity** of the credential-holder (learner), the **legal identity** of the issuer, and the **date** and **location** of issuance of the micro-credential.

Information and guidance

Information and advice on micro-credentials should be incorporated in **lifelong learning guidance** services and should reach the **broadest possible learner groups**, in an inclusive way, supporting education, training, and career choices.

To summarize

- The European Micro-credential aims to standardize certificates for smaller bits of learning, in order to be recognizable and portable
- Micro-credentials are smaller than degree programmes (~1-60 Ects)
- Micro-credentials make use of existing (Bologna) instruments such as ECTS, EQF, Learning Outcomes
- Micro-credentials should be 'stackable' to a full degree
- Micro-credentials offer notable added value in the Lifelong Learning domain
- Today, almost everybody knows what a Bachelor or Masters degree is. Hopefully, the same applies to the Micro-credential in a few years.

December 2021

Small learning experiences, such as short courses leading to micro-credentials, allow for a targeted acquisition of skills and competences adapted to a fast-changing society and labour market while not replacing traditional qualifications. Their objective is

The European approach to micro-credentials aims at providing a clear definition and European standards to allow for the learning outcomes of these small experiences to be easily recognised and understood

institutions, as well as guiding principles to conside using micro-credentials at the EU level can support and enhance national efforts for their quality. transparency cross-horder comparability recognition and portability. It can also help to build trust in micro-credentials for the benefit of the learners employers, and education and training institutions

What is a micro-credential?

The European approach to micro-credentials offers a common definition that is valid across sectors of education and the world of work and mirrors the societal mission of education and training

institutions, including higher and vocational education and training (VET) institutions, and non formal providers as well as employers and labour

A micro-credential is the record of the learning outcomes that a learner has acquired following a small volume of learning. These learning outcomes have been assessed against transparent and clearly defined standards

Courses leading to micro-credentials are designed to provide the learner with specific knowledge, skills and competences that respond to societal, personal, cultural or labour market needs.

Micro-credentials are owned by the learner, can be shared and are portable They may be standalone or combined into larger credentials. They are underpinned by quality assurance following agreed standards in the relevant sector or area of activity.

Short history of Edubadges and Microcredentials in NL

Edubadges

- A service for issuing, managing and sharing Edubadges and Micro-credentials
- Today, we're already hosting more than 6.000 issued Edubadges and Micro-credentials
- All our members are able to use the Edubadges Service
- From May 2023: Both VET and HEI are designing micro-credentials and collaborate on a national framework for quality assurance

When	What
2016	Stakeholder study and Whitepaper
2017	Proof of concept
2019	Edubadges Pilot w. 16 members
2020	Launch of the Edubadges service for all members
2021	Start of the Microcredentials pilot in HE
2023	Start of the Microcredentials pilot in VET
?	Upgrade to Open Badges v3

Interoperability

SURF Edubadges is fully Open Source!

- Currently based on the IMS 1Edtech Open Badge Standard v2
- Addition of eleven metadata-fields to comply with Bologna tools such as ECTS and EQF
- Development of a persistent identity provided by EduID, creating a GDPR compliant flow for awarding, publishing and sharing Edubadges
- Adhering to international standards to ensure interoperability
- We love international collaboration!

QA / Board of Examiners

Micro-credentials QA

Quality Assurance in our Micro-credentials pilot

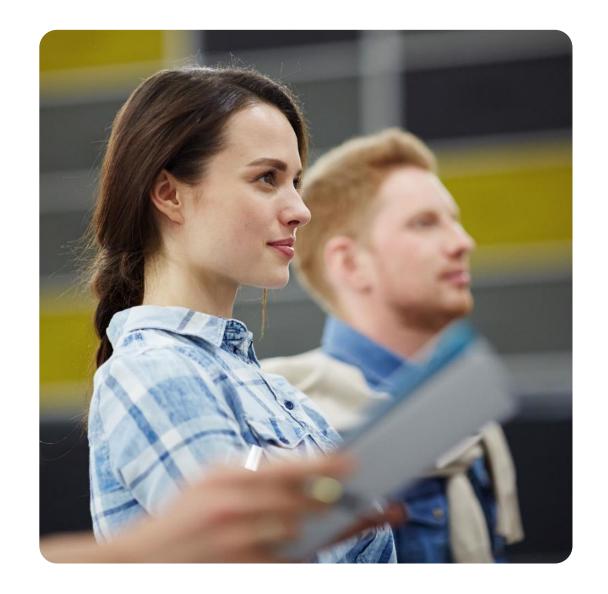

- What about micro-credential accreditation?
- European Standard Guidelines in Micro-format?
- Collaborative bottom-up development of Dutch QA framework in our national pilot

Bologna compatibility

Learning Outcomes > Framework?

• EQF > NLQF?

ECTS > Study hours?

Evaluation scheduled for summer 2023

In the very near future

May 2023

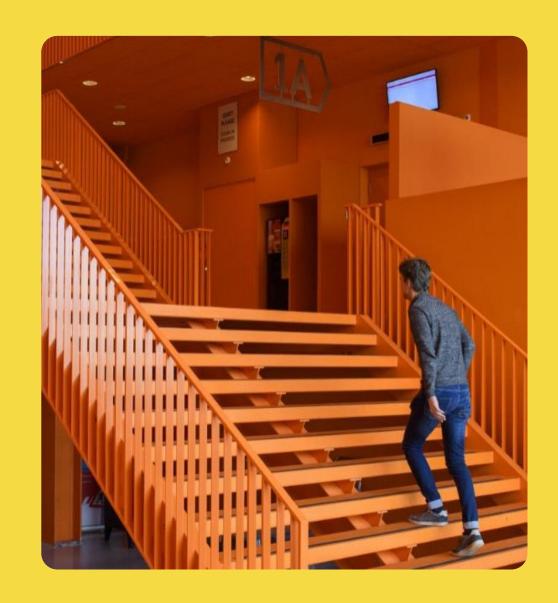

- Addition of Dutch public VET to our national pilot
- Start of DC4EU Large Scale Pilot with electronic wallets and micro-credentials

July 2023

First evaluation of pilot results in HE

Hopefully later this year

 First experiments with Open Badges v3 and Verifiable Credentials

European Policies still need work, mostly on a local level

How to work with smaller courses rather than full degree programmes

- Effective QA measures for smaller courses
- Recognition of Prior Learning
- Accreditation and authorisation: who are qualified issuers of Micro-credentials?

MicroBol continued?

- Support for national authorities on working with Bologna instruments on a micro scale
- How to: EQF, ECTS, Learning Outcomes. Guide member states, universities and VET trying to make the next step.

In 2030...

A European Wallet with Verifiable Credentials

 Will allow all European citizens to manage and share all their credentials in a privacy-friendly way

National Registries of Micro-credentials

- Will host all issued Micro-credentials, managed by the individual learners
- Not unlike the Dutch national degree registry or the national registry of issued drivers licences
